DETAILED ACTION

Claims 1-21, 23-34 are pending. Claims 17-21, 23-34 are considered on the merits. Claims 1-16 are withdrawn from consideration as being drawn to a non-elected invention.

Election/Restriction

Please cancel claims 1-16 in the next response in order to facilitate prosecution.

Claim Rejections – 35 USC § 102

Claims 17, 18, 21 remain rejected under 35 U.S.C. 102(b) as being clearly anticipated by Turpin *et al.* [V] in light of Dobrian *et al.* [W] or Birkett *et al.* [X] or Watanabe *et al.* [Z].

The claims are directed to a composition comprising:

- (1) a metabolizable carbohydrate (glucose),
 - (2) sodium chloride,
 - (3) potassium (ion),
 - (4) calcium (ion),
 - (5) magnesium (ion),
 - (6) bicarbonate ion,
 - (7) epinephrin(e)
 - (8) adenosine
- free of non-metabolizable impermeants
pH about 7.4-8.5

The references are relied upon as explained below.

Turpin *et al.* discloses a composition comprising Krebs-Ringer bicarbonate buffer with 1.5% albumin at pH 7.4 (page 443, methods) to which has been added 0.3µM epinephrine plus adenosine 0.1µM (legend Fig. 4). Albumin is a cytoprotective agent as demonstrated by its antioxidative properties (Dobrian *et al.*) and is well know to have fatty acids and steroids associated with it (Birkett *et al.* and Watanabe *et al.*).

Thus, the composition of Turpin *et al.* which comprises albumin would also contain antioxidant, steroid and fatty acid by virtue of the fact that albumin preparations contain steroid and fatty acid and exhibit antioxidative properties.

Response to Arguments

Applicant's arguments filed 6/6/03 have been fully considered but they are not persuasive.

The examiner apologizes for using the phrase "in view of" which is a phrase associated with obviousness rejections instead of the phrase "in light of" which is used to indicate that the primary reference has all of the claimed elements as explained with the assistance of the secondary references.

Applicant points out that the BSA used in the composition of Turpin *et al.* is fatty acid poor. However, fatty acid poor is not the same as fatty acid free and it is noted that no concentration limitations are present in the claims. Thus, one molecule of a fatty acid would fulfill the claim limitations. Applicant further argues that Turpin *et al.* disclose that free fatty acids do not accumulate in the perfusion system. While this may be true, please note that the claims do not require that the fatty acids be free in the media. Further, while the fatty acids may not accumulate in the media, it is reasonable to assume that at least some molecules of fatty acid bound to BSA are in equilibrium with at least some free fatty acid in the media since the fatty acids are not covalently bound.

Allowable Subject Matter

Claims 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 23-34 are allowable.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

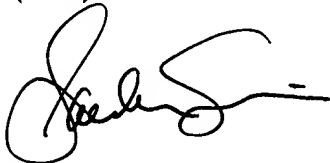

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 1651

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
